AN ORGANIC SOIL CONDITIONER KNOWN AS KALA SONA

Here we are with a motto to promote sustainable organic farming and to ensure farmers get the benefits of their effort and money. Organic Elements Humate is 100% organic soil, can be utilized as a soil conditioner and soil supplement under various conditions and climates. It is the purest form of natural organic matter and one of the most complex substances on earth known to man. Humate is the natural decompose of all plants and animals, naturally and biologically processed for 65-100 million years. We mine these deposits and provide to all farmers, horticulturists, professional landscapers, vineyards, and home gardeners with an objective of an organic, sustainable approach to improving the soil. Humate is essential for life, life of soil, life of plants and life of mankind, because only good soil can make good plants, good crops and good food and a better healthy world. So here we bring actual Kala Sona for you.

WHY YOU SHOULD BUY ORGANIC ELEMENTS HUMATE?

Our land lost its fertility due to prolonged and excess use of chemical fertilizers and pesticides. Why are we using chemicals and pesticides? The reason is our soil is not good or not fertile. However Organic Element Humate can improve fertility and immunity of our soil, nutrition uptake by plants and increase root growth. In fact it's not a fertilizer, but it can be used along with any fertilizers and gradually it will reduce continuous use of fertilizers.

Application Rates:

AGRICULTURE

Apply once annually. Broadcast 40kg/ac (100 kg/ha).
In-furrow and side dress 18kg/ac (45 kg/ha).

TURF GRASS

Greens, tees and fairways: 10kg/1000 ft²
(10kg/100m²). Apply every three months.
