Potash Mobilizing Bacteria (K.M.B)

We, Anand Agro Care are the manufacturer of Bio fertilizers, having manufacturing facility at Nasik Maharashtra. We supply Bio fertilizers to many reputed agrochemical companies. We are license holder from "FCO" for manufacturing Bio fertilizers. Our products are well tested as per Government norms before packing.

Specification:

- CFU: 2×10^8 /ml
- Solubility: Water Soluble
- Shelf Life: 1 Year
- Packaging: 20, 50 & 200 Liter
- Min. Order Quantity: 200 Liter
- Dosage: 2ml/ Liter

Mode of Action: The microbe, *Fratureia spp.* is a beneficial bacterium capable of mobilizing available Potash into near the roots of the plants. It works well in all types of soil especially, low K content soil. Use of such bacteria in powder form can increase the availability of more potash in usable form to the plants.

Benefits:

- Improves resistance of crop against disease and stress conditions.
- Secretes growth hormones to increase crop productivity.
- Enhances soil health and soil fertility.
- In addition to P it increases micro nutrients availability to plant from the soil.
- Encourages faster root growth for water and nutrient uptake
- Helps to increase the crop yield.
- Harmless, Eco-friendly and low cost agro-input.
- Longer Shelf-life
- Higher and perfect bacterial count
- Permitted Organic Input by NOCA as Per NPOP standards of govt. Of India

Application and Dosage:

1. KMB Powder:

- For Seed treatment – 25 gm. / Kg seed.
- For Soil application - 20 gm. / kg. Mix it with manure before 8 – 10 days of application for better results.

2. KMB liquid: For Foliar application 2 ml / Liter.
